

## **ReliabilityFirst Planning Resource Adequacy Analysis, Assessment and Documentation (BAL-502-RFC-02) Standard Five Year Review Posting Question**

1. The ReliabilityFirst Planning Resource Adequacy Analysis, Assessment and Documentation (BAL-502-RFC-02) Standard is up for its five year review. As noted in FERC Order No 747, the Commission directed ReliabilityFirst to 1) consider including a requirement that requires the Planning Coordinators identify any gap between the needed amount of planning reserves defined in Requirement R1.1 and the planning reserves determined from the resource adequacy analysis and 2) add Time Horizons to the two requirements.

Do you believe the Standard should be reaffirmed (which would include a process to respond to FERC directives), revised or retired? If you believe the standard should be revised or retired, please provide specific reasons you believe the standard should be revised or retired.
